

Department of Psychology

Program Out Comes [PO]

- The Department of Psychology graduate program intends to introduce its students to the field of Psychology and provide them with basic essential knowledge of the field. Psychology is a social science, which makes it a blend of art and science, requiring tools to grasp intricate concepts as well as tools to gather data required for any science. The ultimate end for students of this programme is to take their initial steps into being practicing mental health as professionals.

Program Specific Outcomes [PSO]

- Students understand what the study of human behaviour entails and grasp basic concepts within the subject.
- Students understand how the study of psychology encompasses one's personal and social lives.
- Students get an idea about dealing with issues pertaining to one's mental health.
- Students dive deeper into the world of abnormal psychology and mental disorders.
- Students understand how the body and mind are connected in a complex manner, with both affecting each other in very subtle ways.
- Students get an idea about how vast the subject is and get some direction about their inclination towards a specialization.
